112 participants attended

77 participants completed the evaluation (69%) and RATED the Summit 9/10 (an increase from 7/10 for the first lung summit)

95% agreed or strongly agreed that consumer perspectives in lung cancer care provided a good understanding of patient experience of lung cancer care in Victoria.

It’s important to bear in mind the opinions and thoughts presented are a selectively biased group. We won’t hear from the disempowered, less savvy consumers in these sorts of forums.

The day was made infinitely better by including patients and carers. It changed the content and nature of all discussions.

Loved having consumer involvement, especially sitting with us on the table. Motivated to keep patient at the centre of care.

96% agreed the summit provided a good summary of the context of lung cancer care by setting the scene

98% agreed the summit raised relevant and interesting issues related to improving lung cancer care

91% agreed the summit shared useful ideas about how to achieve improvements in lung cancer care

Would have been good to have explanation of ‘end game’ — What happens to the outcomes of today.
